

Autonomous AI-Based Interview Simulator (HR Bot)

Executive Performance Dossier • Target Role: **Software Engineer** • Session ID: f0d0d517-87d2-46...

READINESS CLASSIFICATION:

DEVELOPING (70–84)

Demonstrates foundational competence with clear areas for structured refinement.

COMPOSITE INDEX:

74.0 / 100

Calibrated Multimodal Rubric

Evaluation Date: 2026-09-15 13:06 UTC | **Questions Answered:** 1

Language Track: EN | **Status:** Completed & Verified

1. Core Multimodal Assessment Pillars

Pillar	Weight	Score	Measurement Mechanism
Technical Content Depth	40%	44.0 / 100	Semantic alignment with expected concepts, terminology, and STAR structural progression.
Speech & Delivery Clarity	30%	100.0 / 100	Speaking cadence (WPM benchmark), pause frequencies, and vocal filler ratio.
Optical Composure & Gaze	30%	88.0 / 100	Real-time MediaPipe FaceMesh eye-gaze vector and head-pose stability (Pitch/Yaw).

2. 5-Axis Competency Assessment Matrix

Competency Dimension	Index	Proficiency Level	Diagnostic Takeaway
1. Technical Depth & Precision	45.2	Developing	Command of foundational principles, domain vocabulary, and edge cases.
2. Communication Clarity	99.2	Proficient	Articulation sharpness, minimal hesitation markers, and vocal command.
3. Gaze Composure & Framing	90.1	Strong	Direct eye-gaze maintenance within camera optical reticle; stable head posture.
4. Tone & Cadence Stability	100.0	Proficient	Consistency of pitch and dynamic volume envelope across answer duration.
5. Answer Pacing & Fluency	71.0	Developing	Controlled pacing adhering to the 120–150 words per minute executive standard.

3. Senior Editorial Directives & Action Plan

Key Candidate Strengths:

- **Strength:** Clear articulation and steady speaking pace (~125.0 WPM).
- **Strength:** High confidence, solid eye contact, and composed delivery.
- **Strength:** Minimal use of filler words; highly polished conversational tone.

Actionable Coaching Directives:

- **Action:** Use the STAR Method (Situation, Task, Action, Result) for behavioral questions to give structured, impactful answers.
- **Action:** Compare your answers against the provided Model Answers to learn industry-preferred phrasing and terminology.

4. Per-Question Detailed Rubric Breakdown & Verbatim Feedback

Verbatim candidate transcript, rubric point validation, evaluator commentary, and benchmark reference model answers.

QUESTION 1: Can you explain the core principles of Object-Oriented Programming (OOP) and give a brief real-world example of Polymorphism?	SCORE: 74.0 / 100
Candidate Verbatim Spoken Transcript: <i>"The four pillars of object-oriented programming are encapsulation abstraction inheritance and polymorphism. In object-oriented design encapsulation bundles data and methods together inside a single class while protecting the internal state from unauthorized external mutation."</i>	Pillar Scores: • Content (40%): 44.0 • Clarity (30%): 100.0 • Composure (30%): 88.0
Evaluator Analysis & Rubric Feedback: The candidate correctly identified all four pillars of OOP and provided a solid definition of encapsulation, showing good foundational knowledge. However, the response critically falls short by failing to explain polymorphism or provide the requested real-world example, leaving the majority of the question unaddressed. Targeted Improvement Directives: • After listing the four pillars, allocate time to briefly define each one to demonstrate comprehensive understanding of all four concepts. • Always ensure you address every part of a multi-part question — here, explicitly explaining polymorphism and providing a concrete example such as a Shape base class with a draw() method overridden by Circle and Rectangle subclasses would have fully satisfied the prompt. • Excellent speech fluency with virtually no filler words! • Great pacing at 126.5 WPM within standard conversational limits.	

Automated System Evaluation: Generated via 2-Tier Resilient AI Engine (Faster-Whisper STT + Local Heuristic + OpenRouter).	Department Verification: Final Year Project (FYP) 2026 Examination Archive.
